

MOLD SHIELDS™

IPS Mold Shields™ stop your moldings from scattering randomly in the "drop zone". They ensure your parts land on your conveyor or in your packing case and not on the floor.

Mold Shields are crystal clear plastic curtains which allow you to observe your molding area, and monitor your parts while production is in progress. As the mold opens and closes the **Mold Shield** correspondingly unwinds and recoils itself with each press cycle. Since **Mold Shields** are easily attached and removed as necessary, they can be quickly moved from press to press to meet changing production demands.

Some Benefits of Mold Shields:-

- Reduce Scrap • Eliminate Contamination • Increase Profits
- Easy Installation • Quick Access to the Mold • Movable to Other Presses

If one of our standard size shields won't meet your needs, phone our technical support for your free installation guide and user notes. For vertical presses, where you might need to enclose 3 sides of your mold, we have special kits to meet your application.
